

Rotate Square Matrix 90° Clockwise

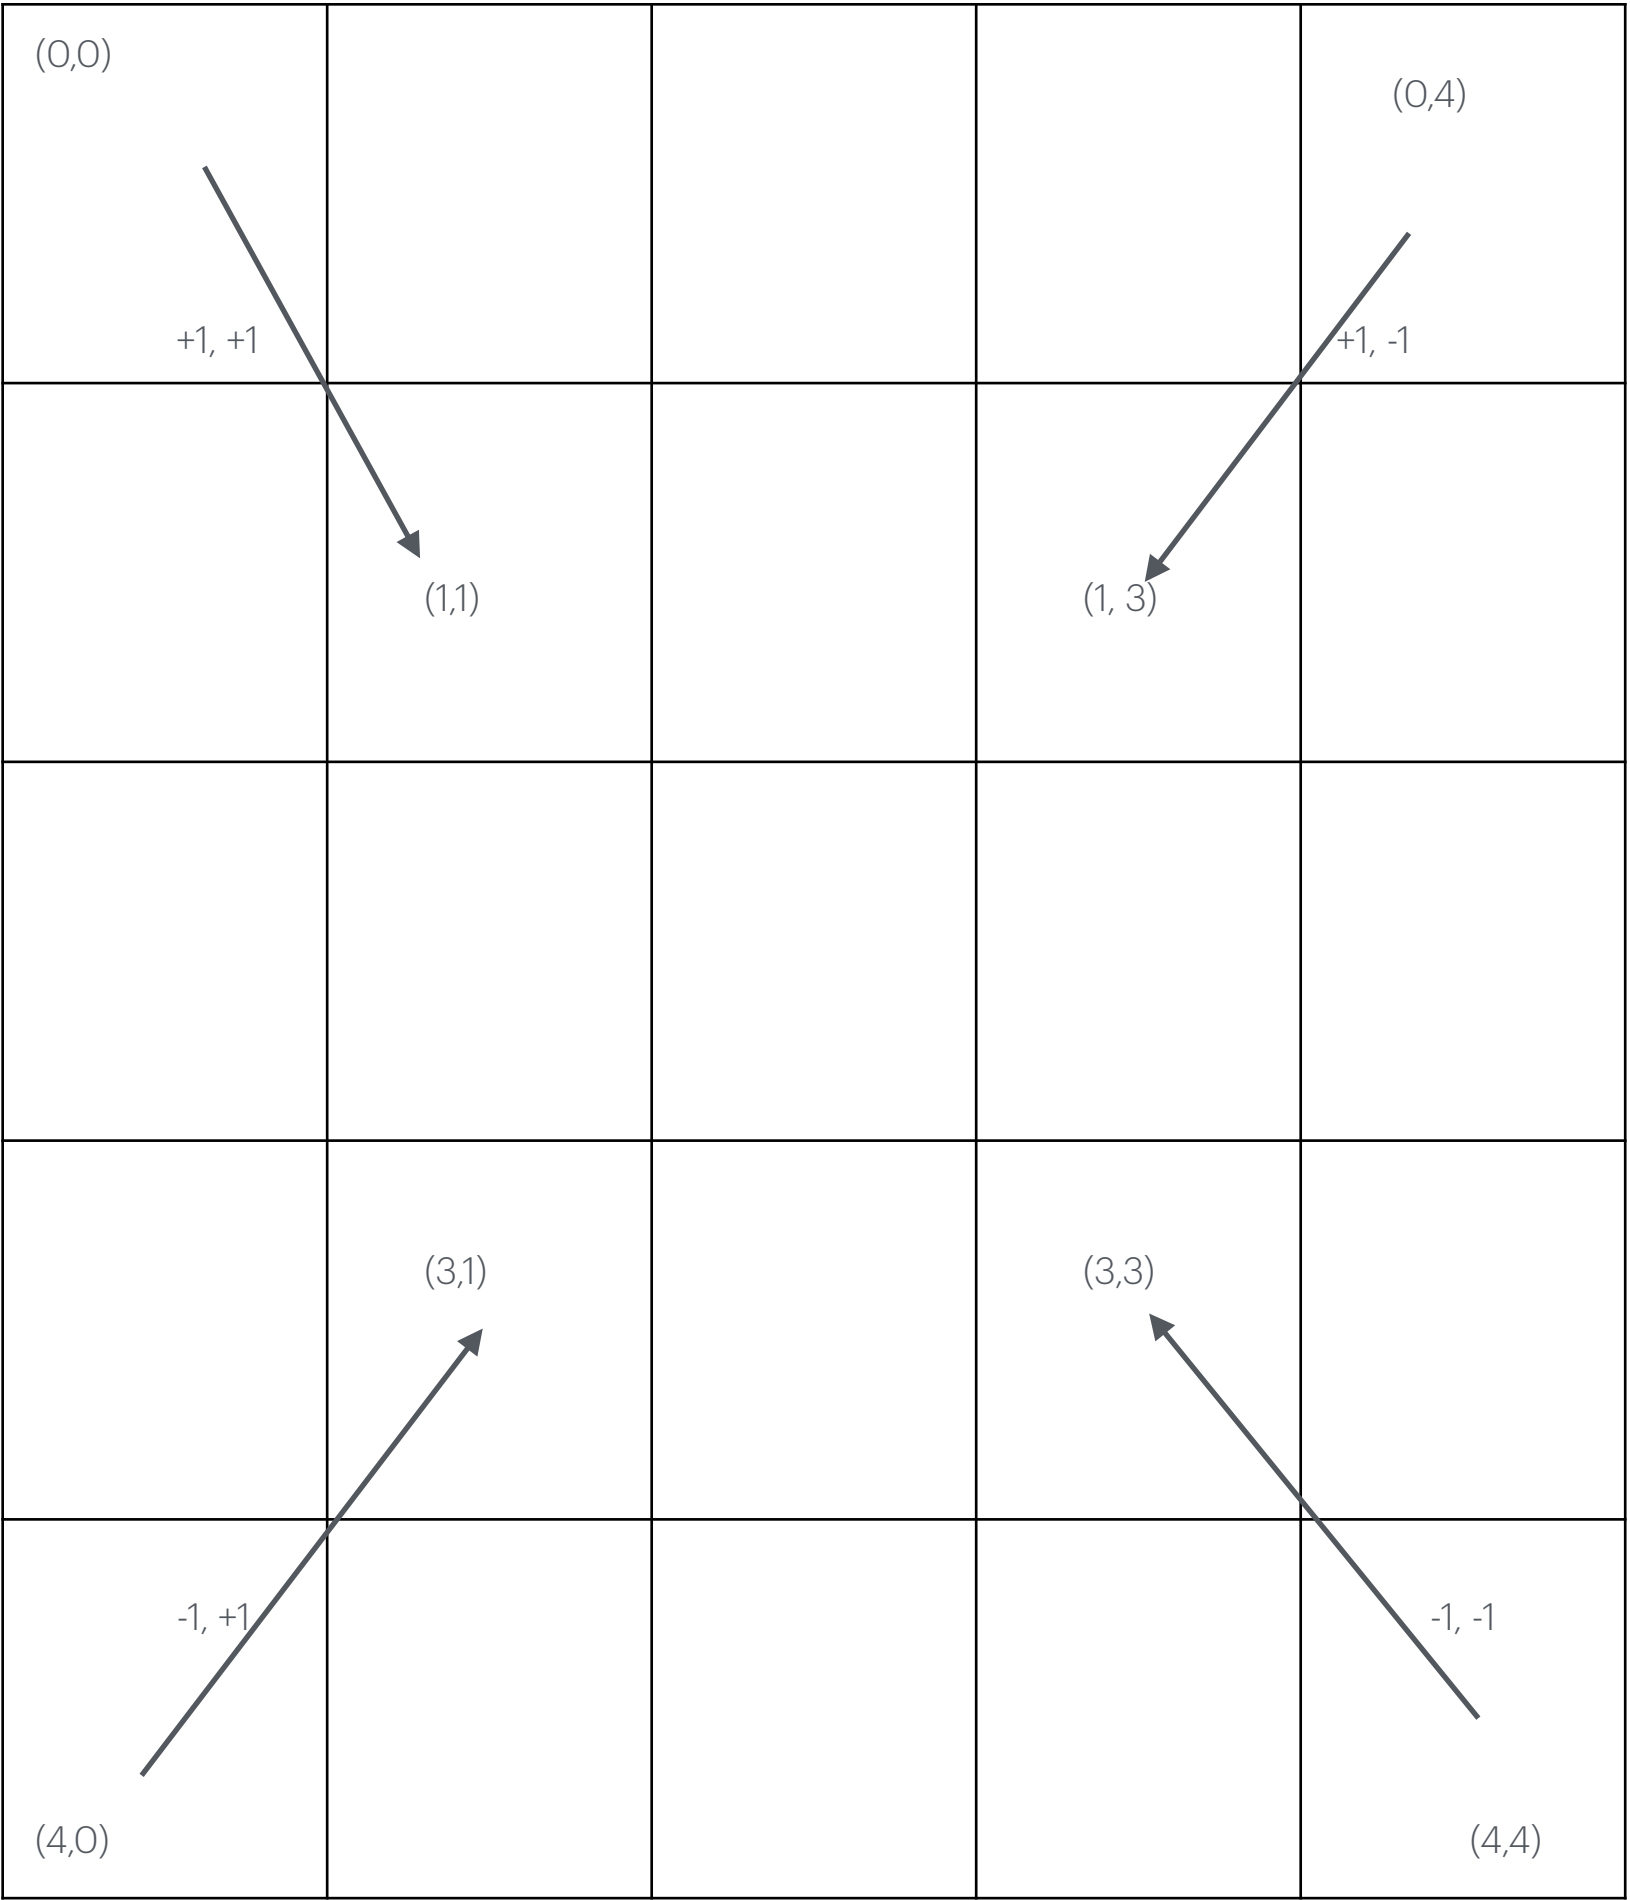

LeetCode : Medium Difficulty

Repeat(i.e. iterations) clockwise rotation D times
 $D = \text{UpperBound} - \text{LowerBound of active space}$
 $D = 4 - 0 = 0$

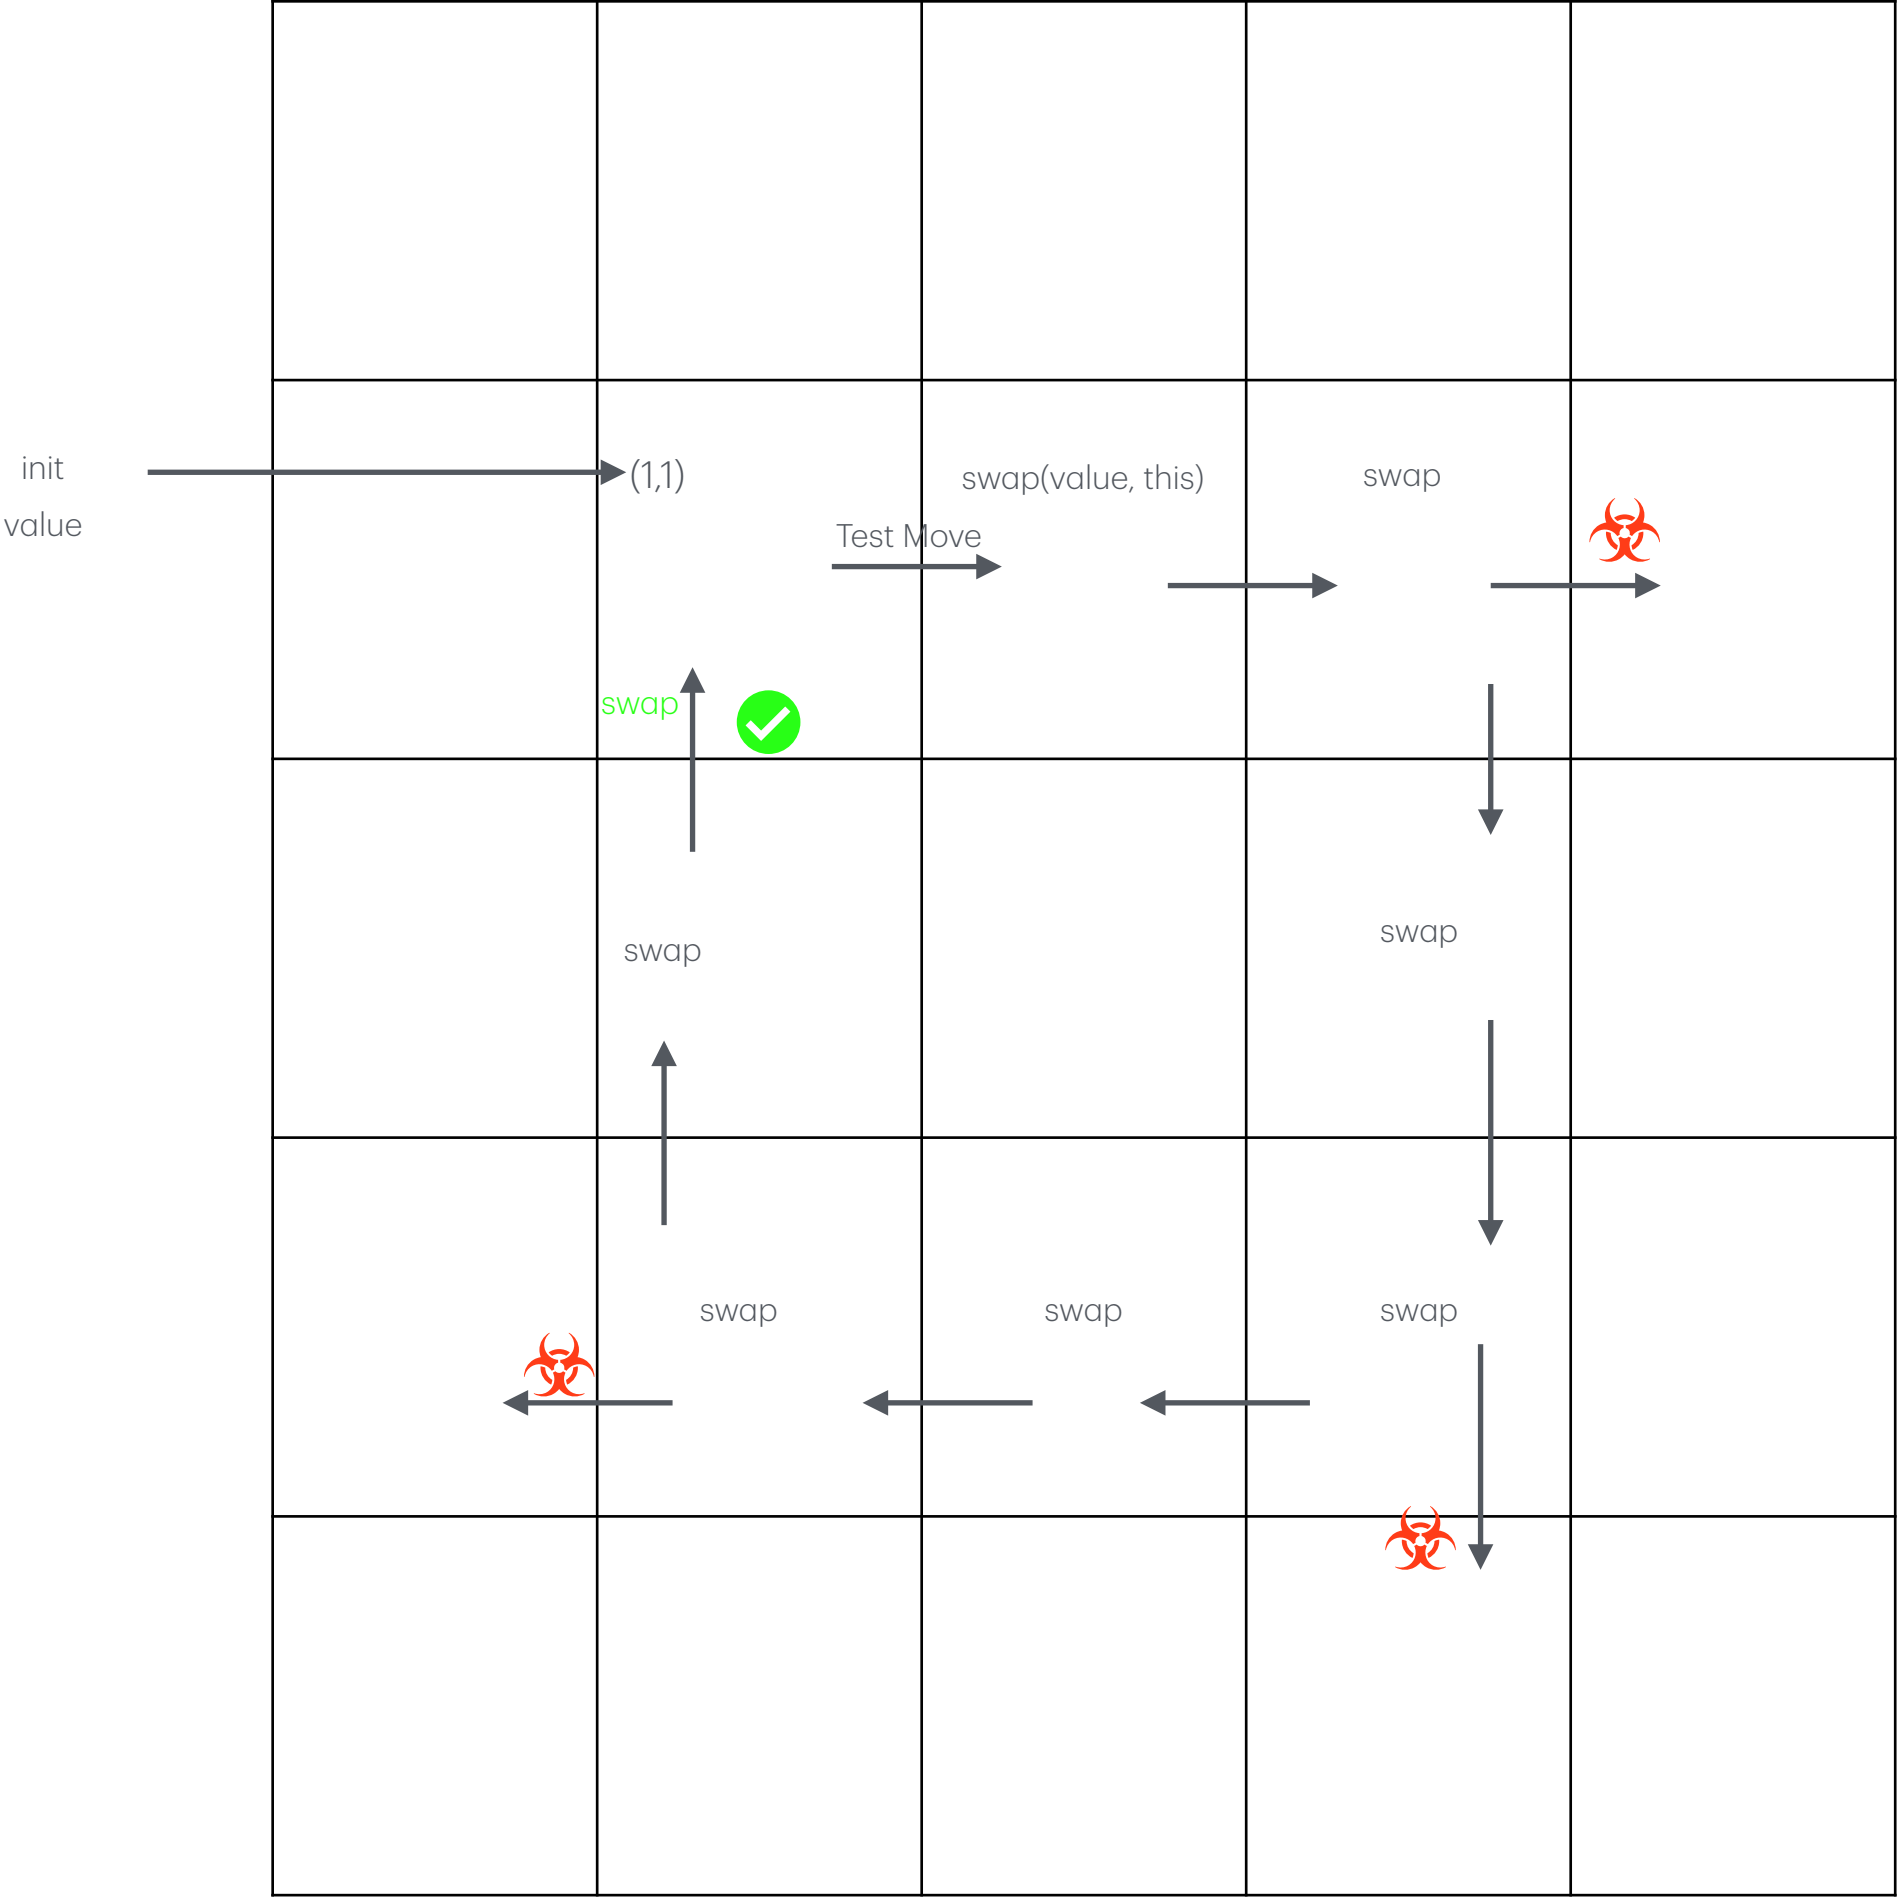

Note: Reset init and other variables after each iteration

Sink inward to rotate next clockwise space

Sink inward to rotate next clockwise space

Stop algorithm when bottom_left corner's row is $\leq$ to top_right corners' row. In this example they are both equal.

init
value
